# TREC 2002 Results

# APPENDIX A

This appendix contains the evaluation results for TREC 2002 runs. The initial pages list each of the runs (identified by the run tags) that were included in the different tracks. Associated with each tag is the organization that produced the run and additional information such as whether the queries were produced manually or automatically as appropriate. Following the run list is a description of the evaluation measures used in most tracks. For more details about the measures used in a particular track, see the overview paper for that track. The remainder of the appendix contains the evaluation results themselves, in the order given in the run list.
