

Appendix: TREC 2008 Legal Track, Interactive Task

This Appendix records the scores (both pre-adjudicated and post-adjudicated) of the experimental Interactive participant runs, experimental reference runs, and experimental Ad Hoc participant runs for the 3 test topics of the Interactive Task of the TREC 2008 Legal Track. (For more information on the task, please see the track overview paper, “Overview of the TREC 2008 Legal Track,” in these proceedings.)

Tables 1 through 6 list the scores of the experimental Interactive participant runs and various reference runs. Tables 1, 3 and 5 list the “pre-adjudicated” scores for Topics 102, 103 and 104 respectively (“pre-adjudicated” means that the scores are from before the participants could appeal the relevance judgments). Tables 2, 4 and 6 list the “post-adjudicated” scores for Topics 102, 103 and 104 respectively.

Tables 7 through 12 list the scores of the experimental Ad Hoc participant runs (Tables 7, 9 and 11 list the “pre-adjudicated” scores for Topics 102, 103 and 104 respectively, and Tables 8, 10 and 12 list the “post-adjudicated” scores for Topics 102, 103 and 104 respectively).

The run identifiers of the 4 experimental Interactive participant runs are Clearwell08, H52008, PittSIST1, ublegal08. For more information on the experimental techniques used for these runs, please see the participant papers and the track overview paper.

The run identifiers of the 4 negotiated Boolean query reference runs are xrefL08D (initial proposal by the defendant), xrefL08P (rejoinder by the plaintiff), xrefL08C (original consensus of the negotiations), and refl08B (final negotiated query after ensuring that the number of matches was in the 100 to 100,000 range).

The run identifiers of 3 other reference runs are fullset08 (the entire set of documents in the collection), adhocpool08 (the set of submitted documents from all Ad Hoc participant runs, plus all negotiated Boolean query documents) and hiF₁-adhoc08 (the highest-scoring Ad Hoc participant run in the F₁ score).

There were 64 experimental Ad Hoc participant runs. Note that the Ad Hoc runs were limited to at most 100,000 documents retrieved for a topic (unlike the Interactive participant runs). More information on the Ad Hoc experiments is in the track overview paper, the participant papers, and other appendices focused on the Ad Hoc task.

For Tables 1 through 6, the table headings were as follows: “Retrieved” is the number of documents in the result set, “Recall” is the estimated recall of the result set (i.e., the estimated number of relevant documents retrieved divided by the estimated total number of relevant documents), “Precision” is the estimated precision of the result set (i.e., the estimated number of relevant documents retrieved divided by the sum of the estimated number of relevant and non-relevant documents), “F₁” is the estimated F₁ score of the result set ($F_1 = 2 * Precision * Recall / (Precision + Recall)$), “Gray” is the estimated percentage of the result set that was gray documents (please see the track overview paper for the definition of a gray document), “Num. Judged” is the actual number of judged documents in the result set, followed in parentheses by the actual number of relevant (r), non-relevant (n) and gray (g) documents. Note that because stratified sampling was used (i.e., different parts of the result sets were sampled with different draw probabilities) the estimated numbers of relevant and non-relevant documents in a result set are not in general exactly proportional to the drawn numbers.

For Tables 7 through 12, the “Fields” column indicates which topic fields were used by the experimental Ad Hoc run (please see the track overview paper for an explanation of the field codes), and “K” is the Ad Hoc system’s choice of the retrieval depth for maximizing F₁ (again, note that “K” was limited to at most 100,000 for Ad Hoc runs).

As always for TREC experiments, it should be kept in mind that retrieval submissions typically are evaluating experimental techniques and do not necessarily reflect typical performance in practice. The test

scenarios may have important differences from practical scenarios. Scores estimated from sampling inherently are subject to sampling error. Relevance assessments are also subject to error, even post-adjudication. Please consult the track overview paper and participant papers for more information on the research methodology and experiments conducted.
