TREC 2005 Results

APPENDIX A

This appendix contains the evaluation results for TREC 2005 runs. The initial pages list each of the runs (identified by the run tags) that were included in the different tracks. Associated with each tag is the organization that produced the run and additional information such as whether the queries were produced manually or automatically as appropriate.

Following the run list is a description of the evaluation measures computed by `trec_eval`. Most tracks use variants of (some of) these measures for the evaluation in that track. For more details about the measures used in a particular track, see the overview paper for that track.

The remainder of the appendix contains the evaluation results themselves, in the order given in the run list.
