

CAsT Track, mixed initiative task results — (CFDA_CLIP) Academia Sinica

Run Description	
Run ID:	CNC_cqg
Category:	automatic
Selective interaction method:	does not use selective interaction (i.e. suggests interaction for all turns)
Question selection method:	generates questions using generative language models (e.g. T5, GPT-3, etc.)
Question selection context:	uses context from earlier conversation history
Question ranking method:	uses supervised pre-trained neural language model (e.g. Mono/Duo BERT/T5)s
Data:	uses previous CAsT data; uses datasets on clarifying questions (e.g. Qulac, ClariQ, etc.)
