

Run Description	
Run ID:	uogTr-MI
Category:	automatic
Selective interaction method:	uses supervised feature-based classification
Question selection method:	selects from the question bank; uses a retrieve + generate model (e.g. DPR + T5)
Question selection context:	uses previous interaction: the previous user and canonical system response
Question ranking method:	uses supervised pre-trained neural language model (e.g. Mono/Duo BERT/T5)s
Data:	uses datasets on clarifying questions (e.g. Qulac, ClariQ, etc.)
